Smart Developer Site Recommendation Report

Generated at: 2026-05-21 17:37 **Strategy:** Low-Rise Apartment **Audience:** developer / real estate agent

1. Executive Summary

This report evaluates candidate sites for **Low-Rise Apartment**. The user intent was: *I want a site for low-rise apartment redevelopment near a train station, with high development zoning, a large site, and limited planning constraints.* The current shortlist contains **3** recommended site(s). The average agent opportunity score is **57.2**. The average policy upside score is **73.5**. The average cost efficiency score is **47.4**. The top-ranked candidate site is **95 BONAR STREET WOLLI CREEK**. The active ranking profile is **budget_sensitive**.

2. Shortlisted Sites

Site	Zoning	Lot Band	Station Access	Constraint	Opportunity	Policy	Value	Cost Eff.	Total Cost	Market Trend	Cost Trend
95 BONAR STREET WOLLI CREEK	R4	xl	within_800m	low	58	73.5	79.8	50.7	$94,500,109	positive	moderate
99A BONAR STREET WOLLI CREEK	R4	xl	within_800m	low	58	73.5	79.8	50.7	$86,395,710	positive	moderate
97 BONAR STREET WOLLI CREEK	R4	xl	within_800m	low	55.6	73.5	79.8	40.9	$132,108,819	positive	moderate

3. Site-Level Rationale

1. 95 BONAR STREET WOLLI CREEK

Source address example: 71/95 BONAR STREET WOLLI CREEK

Key strengths:

- Zoning context: R4 (high_dev).
- Site scale: xl lot-size band, approx. 9427 sqm.
- Transport access: within_800m, approx. 610 m to rail/metro station.
- Agent opportunity score: 58.0.

Policy and planning signal:

- Policy signal: high with upside score 73.5.
- Matched policies: NSW Housing SEPP / In-fill Affordable Housing, NSW Housing Supply Reform Context, NSW Low and Mid-Rise Housing Policy, NSW Transport Oriented Development Program.
- Matched policy rules: low_mid_rise_800m_residential, tod_high_density_station_access, housing_sepp_affordable_bonus_review, r4_large_site_density_signal.
- Policy signal detected: NSW Transport Oriented Development Program; NSW Low and Mid-Rise Housing Policy; NSW Housing Supply Reform Context. The site may have transport-oriented development appeal because it combines station access with zoning and site scale that may support higher-density residential or mixed-use outcomes. The site is within a transport catchment and has zoning that may align with NSW low and mid-rise housing reform themes, subject to detailed planning checks. The site has a strong density signal because it combines high-density residential zoning with a larger site profile, which may increase developer interest under broader housing supply reform settings. This is an indicative policy screening signal only and should be verified against the NSW Planning Portal, applicable LEP/SEPP controls, and professional planning advice.

- **NSW Low and Mid-Rise Housing Policy** (nsw_low_mid_rise_2025): . It does not include freestanding houses. To learn more about low-rise housing, read unpacking low-rise housing . Mid-rise housing is generally 3–6 storey apartment buildings. The Low and Mid-Rise Housing Policy Over th Source: https://www.planning.nsw.gov.au/policy-and-legislation/housing/low-and-mid-rise-housing-policy
- **NSW Transport Oriented Development Program** (nsw_tod_2024): Transport Oriented Development Program In this section NSW needs more housing supply. We have a once-in-a-lifetime chance to shape the Six Cities Region's city planning around Sydney's new world-class metro system and l Source: https://www.planning.nsw.gov.au/policy-and-legislation/housing/transport-oriented-development-program

Economics and feasibility:

- ML transaction-level market value estimate: $1,008,738 (medium confidence).
- Trend-adjusted ML value estimate: $1,039,091.
- Local market trend: positive, indicative 3-month movement 3.0%.
- Estimated acquisition proxy: $9,960,000 (scaled_locality_market_proxy).
- Estimated development cost: $67,632,087.
- Estimated total project cost: $94,500,109 (very_high cost band).
- Construction cost trend: moderate, indicative next-quarter movement 0.7%.
- Value potential: 79.8 (very_high).
- Cost efficiency score: 50.7.
- Cost risk score: 85.0.

Risks / checks:

- Indicative project cost is in the very_high band and requires detailed feasibility review.
- Cost risk score is elevated (85.0).

Agent-facing summary:

95 BONAR STREET WOLLI CREEK is a strong candidate for further review under the selected strategy. It combines R4 zoning, a xl site profile, and low identified planning constraints. The strategy fit score is 97.5, indicating a strong match against the requested development intent. The site also shows a high policy signal, with a policy upside score of 73.5. This is supported by 3 retrieved NSW Planning evidence snippets from official policy sources. The ML value model estimates a typical transaction-level market value in this locality of approximately $1,008,738 with medium confidence; after applying the local market trend adjustment, this becomes approximately $1,039,091. Recent local transaction data suggests a positive short-term market trend, with an indicative 3-month movement of 3.0%. The economics screen rates value potential as very_high, with a value score of 79.8. The indicative total project cost is approximately $94,500,109, placing it in the very_high cost band. Construction cost conditions are currently moderate, with an indicative next-quarter cost movement of 0.7%. The cost efficiency score is 50.7, reflecting the balance between estimated project cost and redevelopment value potential. Because the ranking profile is budget-sensitive, this result is assessed more heavily on cost efficiency and capital intensity. This is an indicative opportunity screen only. It should be verified with planning, valuation, legal, and feasibility advice before being used for a transaction or investment decision.

2. 99A BONAR STREET WOLLI CREEK

Source address example: 514/99A BONAR STREET WOLLI CREEK

Key strengths:

- Zoning context: R4 (high_dev).
- Site scale: xl lot-size band, approx. 8523 sqm.
- Transport access: within_800m, approx. 399 m to rail/metro station.
- Agent opportunity score: 58.0.

Policy and planning signal:

- Policy signal: high with upside score 73.5.
- Matched policies: NSW Housing SEPP / In-fill Affordable Housing, NSW Housing Supply Reform Context, NSW Low and Mid-Rise Housing Policy, NSW Transport Oriented Development Program.
- Matched policy rules: low_mid_rise_800m_residential, tod_high_density_station_access, housing_sepp_affordable_bonus_review, r4_large_site_density_signal.
- Policy signal detected: NSW Transport Oriented Development Program; NSW Low and Mid-Rise Housing Policy; NSW Housing Supply Reform Context. 4. Suggested Next Checks

- Verify zoning permissibility and relevant local planning controls using official planning instruments.
- Review the policy evidence snippets against the full source documents before relying on a policy uplift assumption.
- Review parcel geometry, access, frontage, easements, and title constraints.
- Confirm heritage, flood, bushfire, and environmental overlays through official sources.
- Validate the ML market value estimate against comparable sales and a licensed valuation where required.
- Validate the development cost estimate with quantity surveyor, architect, builder, or feasibility consultant input.
- Stress-test feasibility under different market trend and construction cost escalation assumptions.
- If proceeding, conduct planner / architect / feasibility review before acquisition or design work.

5. Notes

This report is generated from the current prototype feature bundle, retrieval model, reranker, policy screening layer, policy evidence retriever, market value model, cost estimator, market trend model, and construction cost trend layer. It should be treated as a screening and prioritisation tool, not as formal planning, valuation, legal, financial, or investment advice.
