

Smart Developer Site Recommendation Report

Generated at: 2026-05-12 00:06 Strategy: Low-Rise Apartment Audience: developer

1. Executive Summary

This report evaluates candidate sites for **Low-Rise Apartment**. The user intent was: *I want a site for low-rise apartment redevelopment near a train station, with high development zoning, a large site, and limited planning constraints*. The current shortlist contains **5** recommended site(s). The average strategy score across the shortlist is **95.5**. The top-ranked candidate site is **21-37 WAITARA AVENUE WAITARA**.

2. Shortlisted Sites

Site	Zoning	Lot Band	Station Access	Constraint	Strategy Score
21-37 WAITARA AVENUE WAITARA	R4	xl	within_800m	low	97.5
41-45 WAITARA AVENUE WAITARA	R4	xl	within_800m	low	97.5
32-36 ORARA STREET WAITARA	R4	xl	within_800m	low	97.5
16-20 PARK AVENUE WAITARA	R4	xl	within_800m	low	92.5
15-23 ORARA STREET WAITARA	R4	xl	within_800m	low	92.5

3. Site-Level Rationale

1. 21-37 WAITARA AVENUE WAITARA

Source address example: 623/21-37 WAITARA AVENUE WAITARA

Key strengths: - Zoning context: R4 (high_dev). - Site scale: xl lot-size band, approx. 11013 sqm. - Transport access: within_800m, approx. 338 m to rail/metro station. - Strategy score: 97.5.

Risks / checks: - Mixed zoning context may require closer planning review.

Planning rationale:

This development strategy of low-rise apartments is considered to have a strong fit for the site.

The site appears stronger for this strategy due to its supportive zoning, which allows for higher-intensity redevelopment. Additionally, the relatively large site area may accommodate more intensive redevelopment pathways without significant issues. The site's strong rail or metro accessibility also supports this strategy by providing convenient transportation options for residents.

However, there are some constraints that should be considered. The site sits in a mixed zoning context, which may require closer planning review to ensure that the proposed development aligns with local regulations and policies. This could add complexity to the redevelopment process.

2. 41-45 WAITARA AVENUE WAITARA

Source address example: 1703/41-45 WAITARA AVENUE WAITARA

Key strengths: - Zoning context: R4 (high_dev). - Site scale: xl lot-size band, approx. 6485 sqm. - Transport access: within_800m, approx. 466 m to rail/metro station. - Strategy score: 97.5.

Risks / checks: - Mixed zoning context may require closer planning review.

Planning rationale:

This development strategy of low-rise apartments is considered to have a strong fit for the site.

The site appears stronger for this strategy due to its supportive zoning, which allows for higher-intensity redevelopment. Additionally, the relatively large site area may accommodate more intensive redevelopment pathways without significant issues. The site's proximity to rail or metro accessibility also presents opportunities for residents to

easily access nearby amenities and services.

However, there are some constraints that should be considered. The site sits in a mixed zoning context, which may require closer planning review to ensure that the proposed development aligns with local planning regulations. This could add complexity to the redevelopment process and potentially reduce flexibility in terms of design or layout.

3. 32-36 ORARA STREET WAITARA

Source address example: 2804/32-36 ORARA STREET WAITARA

Key strengths: - Zoning context: R4 (high_dev). - Site scale: xl lot-size band, approx. 6485 sqm. - Transport access: within_800m, approx. 466 m to rail/metro station. - Strategy score: 97.5.

Risks / checks: - Mixed zoning context may require closer planning review.

Planning rationale:

This development strategy, focused on low-rise apartments, shows a strong fit for the site. The zoning is supportive of higher-intensity redevelopment, which aligns well with this approach.

The site appears stronger for this strategy due to its relatively large area and strong rail or metro accessibility, both of which can facilitate more intensive redevelopment pathways like low-rise apartments. These factors contribute to a favorable context for this development type.

A mixed zoning context may require closer planning review, potentially adding complexity to the development process.

4. 16-20 PARK AVENUE WAITARA

Key strengths: - Zoning context: R4 (high_dev). - Site scale: xl lot-size band, approx. 5341 sqm. - Transport access: within_800m, approx. 333 m to rail/metro station. - Strategy score: 92.5.

Risks / checks: - No major heritage, flood, or bushfire constraints identified in the current feature bundle.

Planning rationale:

This development strategy, focused on low-rise apartments, shows a strong fit for the site. The zoning is supportive of higher-intensity redevelopment, which aligns well with this approach.

The site's characteristics also contribute to its suitability for low-rise apartments. Its relatively large area suggests that it can accommodate more intensive redevelopment pathways without significant issues. Additionally, the site has strong rail or metro accessibility, making it an attractive location for residents who value convenient transportation options.

There are no material constraints identified in this assessment, and no cautions have been raised. However, as with any development project, a closer review of planning requirements may be necessary to ensure that all relevant regulations are met.

5. 15-23 ORARA STREET WAITARA

Source address example: 99/15-23 ORARA STREET WAITARA

Key strengths: - Zoning context: R4 (high_dev). - Site scale: xl lot-size band, approx. 5886 sqm. - Transport access: within_800m, approx. 339 m to rail/metro station. - Strategy score: 92.5.

Risks / checks: - No major heritage, flood, or bushfire constraints identified in the current feature bundle.

Planning rationale:

This development strategy, focused on low-rise apartments, shows a strong fit for the site.

The site's zoning is supportive of higher-intensity redevelopment, which aligns well with this strategy. Additionally, the relatively large site area may allow for more intensive redevelopment pathways to be explored, potentially increasing density and value. The site also benefits from strong rail or metro accessibility, making it an attractive location for residents.

There are no material constraints identified that would significantly impact the feasibility of this development strategy. However, as with any redevelopment project, closer planning review may still be required to ensure a smooth implementation process.

4. Suggested Next Checks

- Verify zoning permissibility and relevant local planning controls.
- Review parcel geometry, access, frontage, easements, and title constraints.
- Confirm heritage, flood, bushfire, and environmental overlays through official sources.
- Compare the shortlist with recent comparable developments and market demand.
- If proceeding, conduct planner / architect / feasibility review before acquisition or design work.

5. Notes

This report is generated from the current prototype feature bundle, retrieval model, DCN reranker, and local explanation layer. It should be treated as a screening and prioritisation tool, not as formal planning advice.
